

# JACOB KURNAT

My final project website will be a virtual resume website that includes everything from information about me and my career goals to listed references.

The resume website I am building for the MI 349 final project will encompass all the relevant information potential employers may seek when considering me as a potential candidate. It will consist of four pages, the first being an “about me” page, followed by work experience, education/additional experiences, and professional references. The information on my website will be laid out in an organized fashion, following the MI 349 design principles. The final website will be easy to navigate, and convey the information about me in a direct, concise, and effective manner.

## PERSONAS

### Potential Employers

People considering me for a position
